Ballard-Fremont Greenways

Stone Way N and N 36th St. Crossing

Our mission is to improve the safety of this intersection for people walking and rolling

Pedestrians cross Stone Way N at N 36th St. without a crosswalk, darting between turning cars.

Unsafe street crossing

Busy car traffic on a 3-lane road (Stone Way) and a lack of safe pedestrian crossings creates a dangerous barrier between people and where they want to go to shop, workout, and go to school in this busy pedestrian area. This intersection has already been the site of many close calls and unsafe situations (a cyclist was even hit by a car on December 12, 2023).

1. Stone Way N separates two busy pedestrian neighborhoods (Fremont and Wallingford) with limited pedestrian and cyclist crossings.

2. Private construction at Stone Way N and N 36th Street and the ongoing closure of Stone Way N adds barriers for pedestrians and cyclists, and leads to higher cut-through traffic on residential N 36th Street.
3. Traffic on Stone Way N is only going to increase when the Ship Canal Water Quality Project closure ends, and new local businesses open.

Improving pedestrian access would encourage more people to walk through this intersection confidently to get to where they need to go, enabling them to enjoy the attractions in this area. For instance:

1. A parent and young child could cross Stone Way from their home along N 36th St. to the Fremont Community School
2. A biker could head west along N 36th St. from the Burke Gilman Trail to access the Seattle Bouldering Project
3. An elderly couple could cross Stone Way to get to Sea Wolf Bakery

Businesses and schools support improved pedestrian experience

Local businesses and groups agree that pedestrian safety improvements are needed at this intersection. The following have expressed their support for these improvements:

- Sea Wolf Bakers, Seattle Bouldering Project, Evolution Projects, Figurehead Brewing, and Stone Way Cafe
- Parents from Fremont Community School, Lower Wallingford Neighborhood Group

Solutions

It is clear from talking to the many businesses and residents in the area that a crosswalk is the minimum improvement that is necessary to have at this intersection. Further improvements could include:

- Safety crossing beacon to signal that pedestrians are crossing the intersection
- Daylighting around all crosswalks with added bike parking
- Signs reminding drivers that stopping for pedestrians is required by law, or reminding them to look out for bikes
